

AI HANDOUT STUDIO

How to use AI Handout Studio

Ask your agent, finish on screen, hand it out

What it does

Ask, finish on screen, hand out

Ask in chat

In any folder, say "make a handout about ...".
Your agent makes it and returns a URL

Finish on screen

Fix wording, layout and template on screen, or ask your agent to fix it

Hand it out

Export to PDF, PNG, PPTX or HTML. Share by URL or read it on a phone

Three kinds

Slides, HTML documents, question sheets

Slides

1280x720 decks for proposals, study sessions, intros and talks

HTML documents

One page to read top to bottom: designs, requirements, research

Question sheets

Pages where your agent asks you things, including before it starts

01

From request to URL

Flow

Intake, make, check, URL

State the reader, length and message up front and the sheet gets shorter or disappears. Say "just make it" to skip it.

Before making it, ask only what is missing

Before making the study-session slides

I got "make slides for a study session for new hires". Before I start, I only ask what the conversation did not tell me.

Question 1 / 4

Who will read the slides?

The reader decides how much background and how many term explanations to include.

Your answer

☐ People in their first year (recommended)

☐ People on the same team

☐ People outside the company

Answer text

Choosing an option fills in the answer text. You can edit the wording freely.

Question list

0 / 4 answered

01 Who will read the slides?
Not answered

02 About how many slides?
Not answered

03 Do you need screenshots?
Not answered

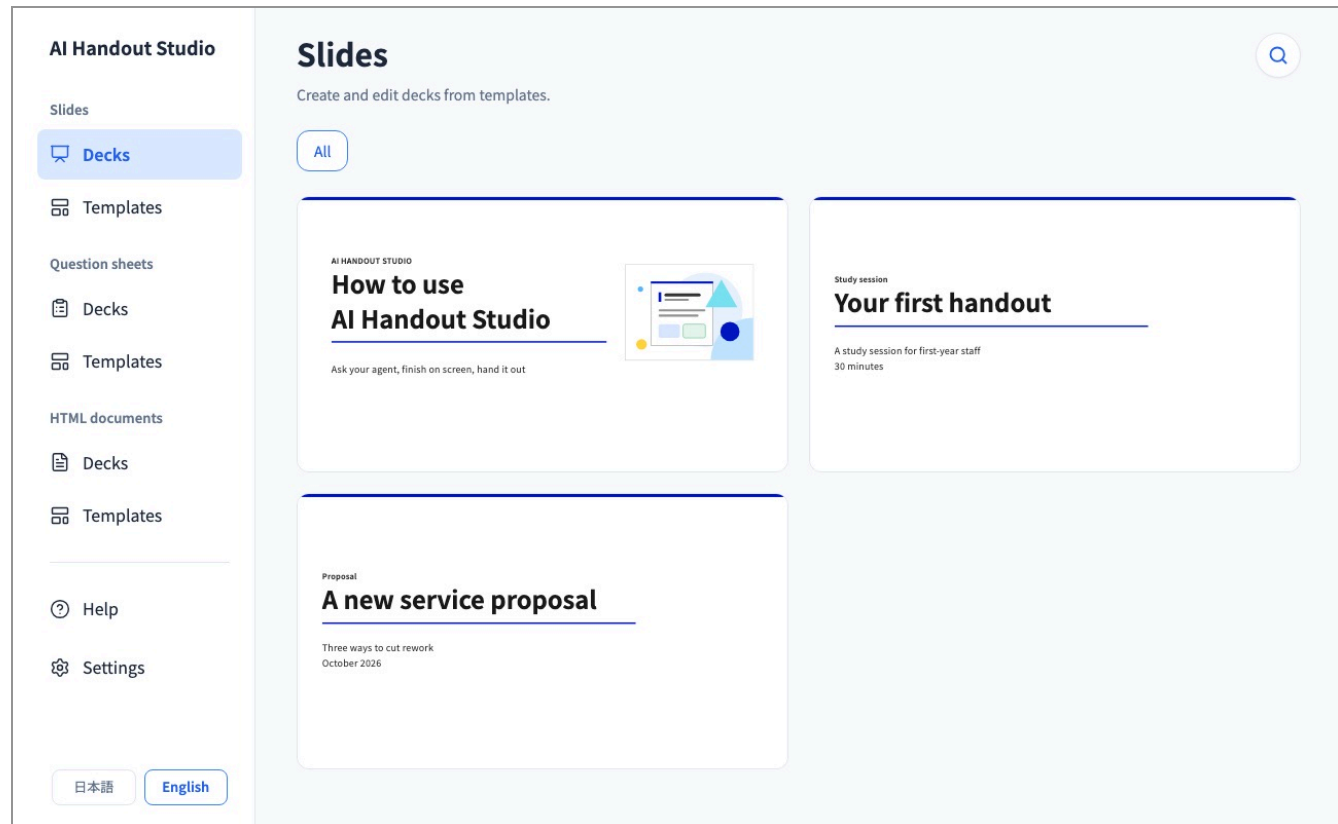

04 What should the title be?
Not answered

- Asks the reader, length and title
- Asks about screenshots when screens are the topic
- Does not ask about templates. Name one to use it
- Press "Copy answers" and paste into the chat

The intake question sheet

Handouts

Everything lands in the list

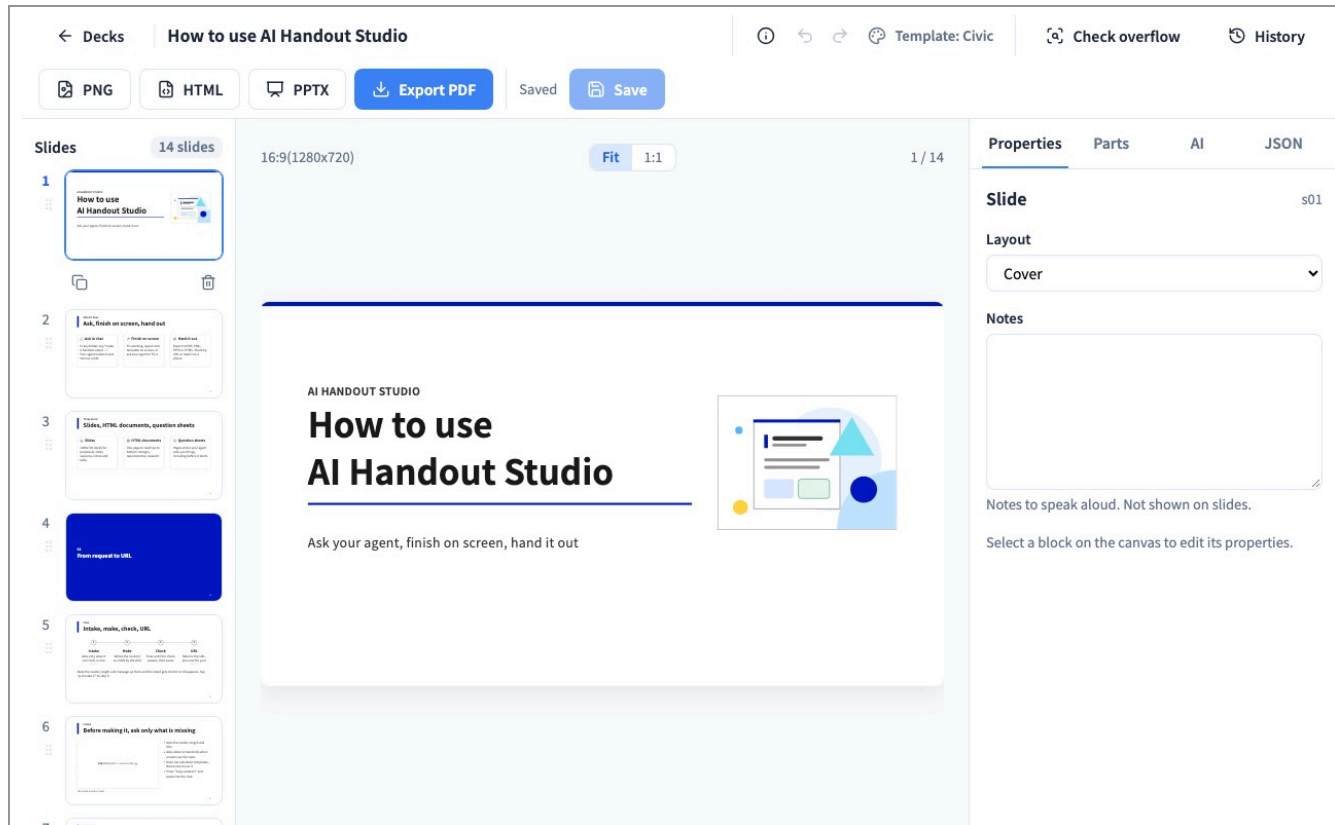

- Cards with cover photos, grouped by kind
- Star a card to pin it under Favorites
- Search titles with the magnifier at the top
- Click a card to open the editor

The handout list

Edit on screen

Small fixes on screen, big ones in chat

- Double-click the canvas to edit text
- Add parts and reorder slides on screen
- Ask for an edit plan in the AI panel and compare
- HTML documents: edit sections and blocks too

The slide editor

Templates

Templates own the look

- Colors, fonts, spacing and ornaments come from the template
- The one with a star is the default
- Ask by name, like "make it with Lumen"
- On screen you can change text size and layout

Slide templates

Export in four formats

Format	What you get	Good for
PDF	One slide per page	Handing out and printing
PNG	One 1280x720 image per slide	Pasting into chats or docs
PPTX	Notes become speaker notes	Presenting from a slide app
HTML	One HTML file to hand out	Reading in a browser

HTML documents and question sheets export to one HTML file with the CSS inside.

Share

To send a URL, say "share it"

What happens

Question sheets and HTML documents are published as a Claude Artifact and you get the URL. Asking again updates the same URL. Slides are not supported yet

Keep in mind

The Artifact starts private. You choose on the Artifact page whether to make a public link. With a public link, anyone can read the names in the handout

On your phone

Open it on a phone on the same Wi-Fi

- Set `features.lan` to true and your agent adds URLs for your phone
- Question sheets and HTML documents read at full size; you can answer sheets on the phone
- For slides you get the editor URL, which is sized for a computer
- While open to the LAN, anyone on the network can read. Skip it on shared Wi-Fi

Common problems and what to do

When	Do this
Command not found	In the repo, type /studio-setup (Codex CLI: ask "Set this up by following SETUP.md.")
Check the setup	Run ai-handout-studio doctor and read that section
Port 5190 in use	<code>lsof -nP -iTCP:5190 -sTCP:LISTEN</code> shows the owner
Phone can't open it	Check the Wi-Fi, LAN mode and the firewall
Deleted these handouts	Run ai-handout-studio examples to add them again

That's it

Start with one request

Begin with "make a handout about ..."
